## Products

### We build applications

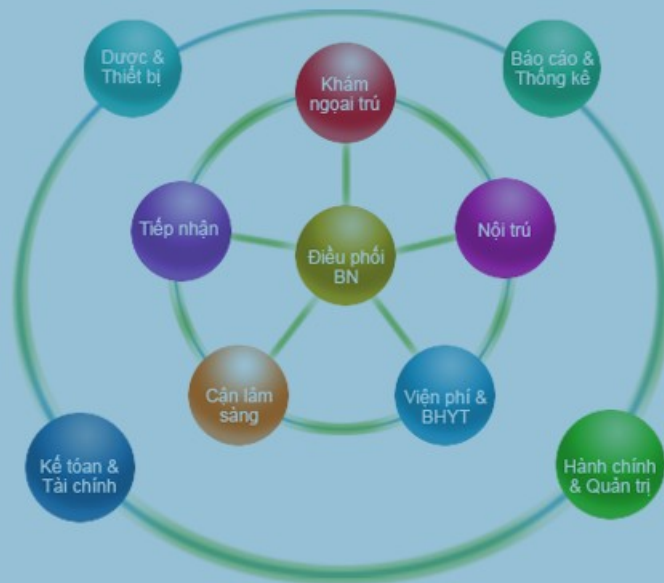

**AthenaClinic** ([www.athena-clinic.vn](http://www.athena-clinic.vn)) is a hospital information system (HIS) product family. It is fully implemented and has been tested and used in professional medical practice. From patient intake, consultation, examination, tests, and billing to medicine dispensation, **AthenaClinic** has a complete set of features for all the business requirements of a clinic or hospital.

Implemented as a web-based software, **AthenaClinic** has several advantages such as information retrieval, access to the system from anywhere at any time by a web browser. It also introduces key advantages in effectiveness, maintenance, and upgrade that cannot be achieved by any thick-client/server software.

We developed and applied **AthenaClinic** into the following hospitals in Vietnam:

- Cao Thắng Hospital
- Tâm Thần HCMC Hospital
- Hồng Đức Hospital
- An Phú International Clinic

**Services**

## We build applications

LHV Software has been appraised at **CMMI Maturity Level 3** and **ISO 9001:2000** since 2008.

Applying these International standards into production we maintain and improve an effective quality system, standardized software development and testing processes. A set of well-defined policies, processes and best practices for full software development life cycles help us achieve high product quality, on time delivery and exceed customer expectations.

### Software development

Following RUP and CMMi methodologies, our standard **software development cycles** include Requirement Collection, Requirements Analysis, Features Design, Implementation, Testing, Documentation, Deployment and Maintenance.

We are experienced with **web based application** using LAMP stack (Linux, Apache, PHP and MySQL). Many of our projects are running in real environment with thousands of users. We are also able to use any technology required by particular projects or customers, e.g. Java, C++, C#/.NET, Eclipse, Microsoft Visual Studio, Oracle, MsSQL, Windows, Linux, Solaris, etc.

The popularity of **mobile applications** has risen tremendously along with the revolution of smartphone and tablet. LHV Software will consider your business and your needs to develop iOS (iPhone, iPad) or Android development ideas. Our mobile application developers work hard to make that idea a productive, profitable and reality for your business.

### Testing

We provide customer **quality control** services to ensure a certain level of quality in products following a standard process. Firstly the test requirement will be formed to determine a test scope, followed by the test plan, in which each product feature will be scheduled for creating test cases.

We apply parallelly two methods in testing: automated test, system and acceptance test. For **automated test**, we combine different types of testing from Unit & Integration Test to User Interface Automated Test using JUnit, PHPUnit, HtmlUnit, Selenium, Load Runner, Quick Test Professional, etc. For **system and acceptance test**, we follow the standard process mentioned above, in which each test case will be tested, each product issue will be reported as a defect to a centralized server, such as Bugzilla, Quality Center, etc. Finally a test report is created to summarize the stability status of the product.

## History

### We build applications

LHV Software was established in **April 2004** to become a subsidiary of Systinet in Vietnam. In the next two years, we have built a strong core team. Our employees have been carefully selected from talented graduates and experienced developers. We have implemented various software projects together with Systinet team.

In **February 2007**, Systinet/Mercury were taken over by Hewlett Packard and LHV Software has become an independent outsourcing center. We established **long term partner contract with HP** in Vietnam since then. We also cooperated with other clients in North America and Europe.

For better quality services, LHV Software started implementing **CMMI Level 3** and **ISO 9001:2000** to continuously improve our processes and achieved them in **May 2008**.

In **2009** we provided outsourcing services, including software development and testing service, to new customers such as SOAREA, Expense Bay and Good Data company. We have been continuing to build a long term relationship with HP SOA R&D Center. LHV Software also developed the first version of **AthenaClinic**, a web based hospital information systems, with complete set of features for all the medical management requirements.

Along with providing outsourcing services for existing customers as well as establishing a relationship to new customer Grab LLC, LHV Software continued to develop a set of new features for **AthenaClinic** in **2010**.

In **2011** teams working in HP project was acquired by HP's newly created site in HCMC. LHV Software office was moved to Ngoc Dong Duong building, District 3, HCMC. In this year we successfully deployed **AthenaClinic** at some hospitals and clinics such as Cao Thắng, Hồng Đức, Tâm Thần, An Phú, etc. We also signed new contracts with Expense Cloud and Betterworks companies.

LHV Software has always been a customer-centric organization and continuously improves its services quality to serve the customer better.
