## LHV Software Track Record AthenaClinic

**AthenaClinic** is a hospital information system product family. It is fully implemented and has been tested and used in professional medical practice. From patient intake, consultation, examination, tests, and billing to medicine dispensation, **AthenaClinic** has a complete set of features for all the business requirements of a clinic or hospital.

Implemented as a web-based software, **AthenaClinic** has several advantages such as information retrieval, access to the system from anywhere at any time by a web browser. It also introduces key advantages in effectiveness, maintenance, and upgrade that cannot be achieved by any thick-client/server software.

We developed and applied **AthenaClinic** into the following hospitals in Vietnam:

- Cao Thắng Hospital
- Tâm Thần HCMC Hospital
- Hồng Đức Hospital
- An Phú International Clinic

## LHV Software Track Record Systinet Registry

**Systinet Registry** is the most complete and proven business service registry providing a foundation for SOA governance and lifecycle management.

**Systinet Registry** captures all the functional and non-functional service descriptions into a centrally managed, reliable, searchable location.

**Systinet Registry** is the only registry to fully support the latest UDDI V3 specification and is the most feature complete SOA registry available today. It is much more than a UDDI Registry.

**Systinet Registry** becomes the System of Reference for all SOA information.

We cooperate with Systinet team in Registry Console improvement, adding new security features, internationalization, etc. We also assure whole Systinet Registry functional, benchmark, stress, interoperability testing in all supported JDKs, platforms, databases and Registries from other vendors.

### Systinet Registry OEM for Oracle, Bea & Tibco

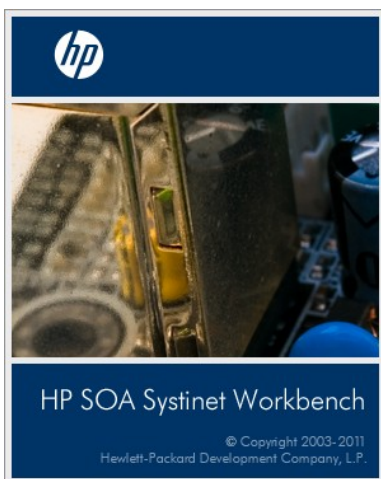

We have performed necessary work for **Systinet Registry** OEM including UI customization, installation and porting to third vendor application servers including Oracle AS, Web Logic AS and various other important elements to make these distributions complete:

- **Oracle** Application Server 10g Release 3 integrates the **Systinet Registry**, so users will be able to gain control of their SOA deployment and realize benefits such as agility where IT and business processes work together seamlessly and in real-time.
- **BEA**, a world leader in enterprise infrastructure software, helping companies improve business responsiveness through SOA to more closely align IT with business objectives, will incorporate the **Systinet Registry** into BEA's AquaLogic product family and re-brand the product as **BEA AquaLogic Service Registry**.
- **Tibco** resells **Systinet Registry** as a component of TIBCO's comprehensive service-oriented architecture (SOA) governance solutions. TIBCO® chose **Systinet Registry** because it provides a simple, standards-based means for publishing and discovering reusable business assets and offers enterprise organizations greater control and visibility into the services lifecycle.

## LHV Software Track Record HP SOA Systinet Workbench

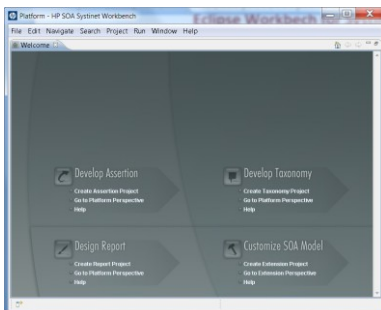

**HP SOA Systinet Workbench** is an integrated Eclipse-based tool of Taxonomy Editor, Assertion Editor, Report Editor and Customization Editor which are clients connecting to HP SOA Systinet.

**Taxonomy Editor** is a client application used to manage and edit taxonomies on one or more Systinet Servers, enables user to connect to servers, download taxonomies, edit them and publish to server.

**Assertion Editor** is a set of features for use with the Policy Manager component of HP SOA Systinet. Assertion Editor enables you to create, edit, and delete assertions on any number of Policy Manager servers. In addition, you can use Assertion Editor to test an assertion, validating the assertion against a source document.

**Report Editor** is used as a eclipse plugin with BIRT to support professional users to download, create new, edit and publish a BIRT Report to/from Systinet.

**Customization Editor** is a set of Workbench features that enable you to edit the underlying SOA Definition Model (SDM) configuration of an installation of Systinet.

### Systinet Developer

**Systinet Developer** provides powerful and simple tools that help developers rapidly and efficiently create SOA applications. The tools are available as plug-in modules to the popular open source Eclipse IDE, and any Java class can be exposed as a Web service in a matter of minutes.

**Systinet Developer** also supports instant deployment of Web services from within the IDE, and it includes a runtime monitor that allows the developer to check the on-the-wire traffic for testing purposes. Close integration with the UDDI registry ensures the synchronization of developed components within large development teams.

From version 5.5, **Systinet Developer** is developed by our team under Systinet guidance.

### Systinet Mapper

**Systinet Mapper** is a tool for mapping elements of XML schemas to each other and to elements of WSDL files in order to create XML transformations (XSLTs). Using **Systinet Mapper** a user can transform the content of XML documents such as SOAP messages into one or another XML format.

**Systinet Mapper** is a development based on Eclipse technology. **Systinet Mapper** is available stand alone or as an Eclipse plug-in version. This product was developed mainly by our team.
